

**Amendments to the Claims**

With this Amendment, claims 8 and 10 have been cancelled and claim 40 has been added. This listing of claims will replace all prior versions and listings of claims in the application.

1. (Previously Presented) A cleaning composition comprising:
  - (a) an anionic surfactant and amine; and
  - (b) a water hardness anti-precipitant mixture comprising 0.5-1.5 wt% of maleic anhydride/olefin co-polymer and 0.001-10 wt % of EO-PO co-polymer at a weight ratio of the maleic anhydride/olefin co-polymer to total amount of the EO-PO co-polymer between about 1:75 and about 75:1, wherein the amount of the water hardness anti-precipitant mixture to the anionic surfactant and amine is sufficient to prevent visible precipitation when the cleaning composition is diluted with dilution water having one grain hardness at a weight ratio of 1:1.
2. (Canceled)
3. (Previously Presented) A cleaning composition according to claim 1, wherein the amount of the water hardness anti-precipitant mixture to the anionic surfactant and amine is sufficient to prevent visible precipitation when the cleaning composition is diluted with dilution water having 20 grain hardness at a weight ratio of 1:16.
4. (Canceled)
5. (Previously Presented) A cleaning composition according to claim 1, wherein the cleaning composition contains between about 0.1 wt.% and about 10 wt. % of the anionic surfactant and amine.
6. – 10. (Canceled)

11. (Original) A cleaning composition according to claim 1, further comprising an organic solvent.
12. (Original) A cleaning composition according to claim 11, wherein the organic solvent comprises at least one of glycol ether and derivatives of glycol ether.
13. (Original) A cleaning composition according to claim 11, wherein the cleaning composition comprises between about 0.1 wt.% and about 99 wt.% of the organic solvent.
14. (Original) A cleaning composition according to claim 1, further comprising between about 0.1 wt.% and about 99 wt.% deionized water.
15. (Original) A cleaning composition according to claim 14, wherein the cleaning composition is provided as a use solution resulting from a dilution of the cleaning composition with water of dilution at a weight ratio of cleaning composition to water of dilution of between about 1:1 and about 1:1000.
16. (Original) A cleaning composition according to claim 15, wherein the water of dilution comprises water having a hardness of at least about 1 grain.
17. – 38. (Cancelled)
39. (Previously Presented) A cleaning composition comprising:
  - (a) an anionic surfactant and amine; and
  - (b) a water hardness anti-precipitant mixture comprising maleic anhydride/olefin co-polymer and at least EO-PO co-polymer at a weight ratio of the maleic anhydride/olefin co-polymer to the total amount of the EO-PO co-polymer sufficient to prevent visible precipitation of the anionic surfactant and amine on a glass surface when the cleaning composition is diluted with water of dilution at a weight ratio of the cleaning composition to

water of dilution of between about 1:1 and about 1:1000 and wherein the water of dilution contains at least 5 grains hardness.

40. (New) A concentrate cleaning composition comprising:

- (a) between about 0.1 wt% and about 10 wt% anionic surfactant and amine; and
- (b) a water hardness anti-precipitant mixture comprising between about 0.5 wt% and about 1.5 wt% maleic anhydride/olefin co-polymer and between about 0.001 wt% and about 10 wt % EO-PO co-polymer.
